EDUCATION

The Pennsylvania State University

Bachelor of Science in Applied Data Sciences

State College, PA

Aug. 2024 – May 2028 (Expected)

- **Relevant Coursework:** Programming & Computation I & II, Data Management, Intro to Data Science, Intro to R, Elementary Probability, Calculus with Analytical Geometry I & II, Matrices, Discrete Mathematics.
- **Upcoming Fall 2026:** Data Science Through Statistical Reasoning and Computation, Data Integration, Algorithmic Methods and Tools, Privacy and Security for Data Sciences.

TECHNICAL SKILLS

Languages/Coding: Python, R, SQL, LaTeX

Libraries/Tools: Pandas, NumPy, scikit-learn, MLflow, Prefect, Streamlit, Matplotlib, Seaborn, Jupyter/Google Colab, Quarto, Git/GitHub, Power Automate, Power BI, Microsoft 365

Methods: Machine Learning, Feature Engineering, Time Series Analysis, Statistical Modeling, Composite Index Design, CI/CD Automation

Spoken Languages: English (Native), Spanish (Native)

EXPERIENCE

Capital Markets Intern

JMMB Puesto de Bolsa, S.A. (JMMB Group)

Santo Domingo, Dominican Republic

Jul. 2026 – Aug. 2026

- Built a data-extraction pipeline (Python, pypdfium2) to digitize audited financial statements from scanned, image-only regulatory filings for JMMB and 14 peer broker-dealers (FY2023–2025) into a consolidated Excel workbook, enabling standardized cross-entity financial benchmarking across the DR capital markets sector.
- Automated a Python-based translation pipeline (python-docx, openpyxl) that converted 30+ scanned Spanish financial, legal, and corporate documents. Audited financial statements, credit bureau reports, corporate bylaws into formatted English deliverables for a real estate financing transaction, preserving all figures, formulas, and legal entity names.
- Synthesized 10+ government and industry data sources (CNZFE, Banco Central, EY) into a data-driven market research presentation (python-pptx) on the Dominican free-trade-zone sector, quantifying regional investment concentration to brief JMMB's investment strategy team on a growth opportunity.

Data Science Intern

La Sociedad & Partners Consulting Group

Santo Domingo, Dominican Republic

May 2026 – Jul. 2026

- Built an automated HR applicant-screening pipeline (Power Automate + Claude) that processed 100+ candidate CVs, cutting manual review time and standardizing status tracking for the hiring team.
- Engineered a live Python pipeline ingesting 12 macroeconomic indicators from 3 APIs to score Dominican Republic economic vulnerability weekly, replacing a manual reporting process with an automated dashboard used by leadership.
- Delivered 3 executive presentations translating pipeline outputs into strategic recommendations, extending automated reporting to 2 client accounts.

TECHNICAL PROJECTS

DR Economic Vulnerability Index | *Python, GH Actions, pandas, openpyxl, Chart.js*

May – Jun. 2026

- Designed a weighted 0–100 composite vulnerability score from 12 macroeconomic indicators with automated data-quality enforcement and gap-filling logic.
- Deployed a public dashboard and auto-updating Excel workbook via GitHub Actions, distributed weekly to stakeholders with zero manual intervention.

U.S. Recession Probability Dashboard | *Python, scikit-learn, MLflow, Prefect, Streamlit*

Jun. 2026

- Trained a gradient boosting classifier on 421 months of FRED data (cross-validated AUC-ROC: 0.998) to score recession probability weekly.
- Automated the full pipeline end to end, from data ingestion through weekly scoring and redeployment, using Prefect orchestration and GitHub Actions.

Global Aviation Recovery Analysis | *R, Tidyverse, ggplot2*

Mar. 2026

- Analyzed 6 years of passenger traffic across the world's 20 busiest airports to identify a “two-speed” post-pandemic recovery between domestic- and international-heavy hubs.
- Built a data pipeline to clean and reconcile traffic records with structural gaps caused by pandemic-era travel restrictions.
